

# Cloud to Crowd Facebook Set-Up Reliable RTMP Stream by Using dvCloud

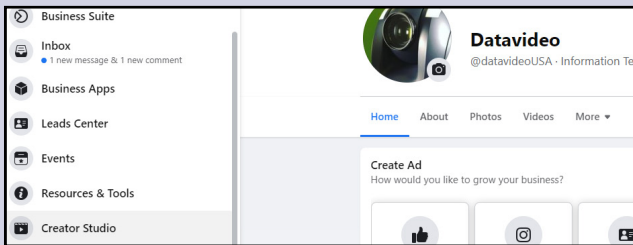

A free firmware update to Datavideo products maybe necessary for SRT support.

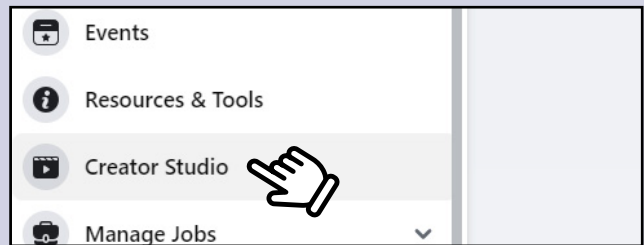

**1.** Access dvCloud.tv in a browser window by typing in the supplied domain name, which was provided to you from dvCloud. Select a channel which you want to stream from.

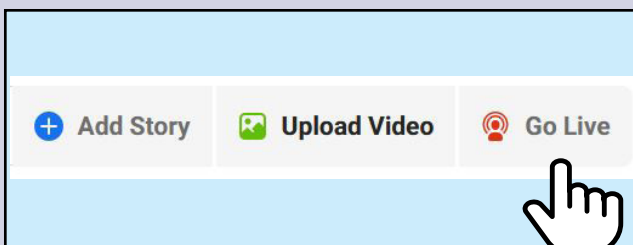

**2.** Navigate to the "Add your Streaming Destinations". Select Facebook.

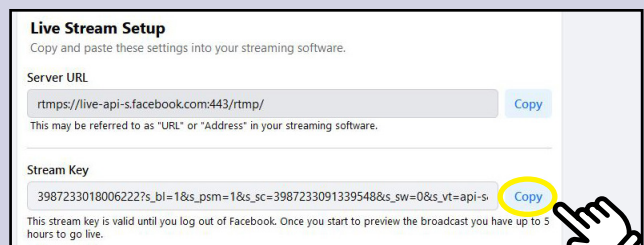

**3.** Log into you organization's Facebook page in another browser window.

**4.** Select "Creator Studio" from the left hand side

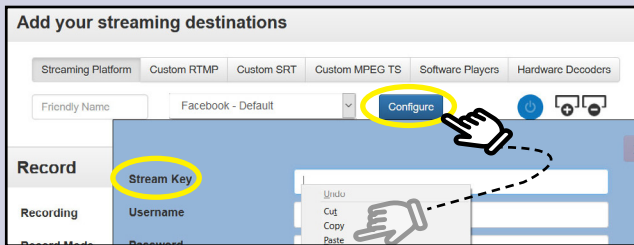

**5.** Click on "Go Live" to open the Live Producer.

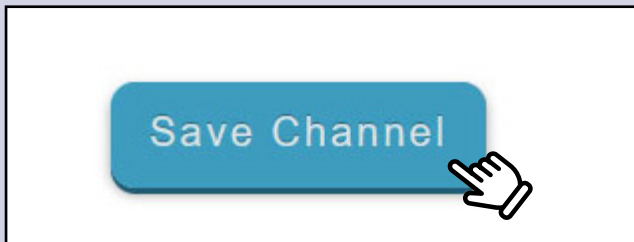

**6.** Under "Live Stream Setup", select copy the stream key.

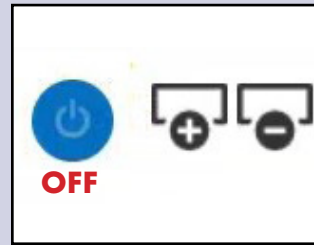

# Cloud to Crowd Facebook Set-Up Reliable RTMP Stream by Using dvCloud

**7.** Go back to dvCloud.tv browser window under "Add your streaming destinations". Select "Configure" and paste in the stream key

**9.** Select "Save Channel" located at the bottom of the dvCloud channel

**8.** Turn on the "Power Button"

**10.** Hold the "Stream" button for 3 seconds until it blinks on the encoder or Click "Stream" on ADMIN UI.

**11.** It takes a few seconds for your stream to appear. Then you are all set.

## TROUBLE SHOOTING

If you don't see a preview of your stream, check your dvCloud channel and see if there is a message asking you to reload the channel. If you see the message, stop streaming. Reload dvCloud by locating the window on top of dvCloud homepage.

Start streaming again.
